Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims

(Currently Amended) An embolic protection sheath, comprising:

 an elongate shaft having a proximal end and a distal end, and a lumen

extending therethrough;

a coil assembly including a first coil and a second coil, the first coil defining a lumen and being wound in a first direction; the second coil being wound in a second direction and disposed about an outer surface of the first coil; and

wherein the coil assembly has a diameter that is larger than the diameter of the shaft; and

wherein the coil assembly is <u>attached</u> to the outer <u>surface disposed about</u> at <u>least a portion</u> of the distal end of the shaft, and the lumen of the shaft is <u>in</u> fluid communication with the lumen of the first coil.

- 2. (Original) The sheath in accordance with claim 1, wherein the first coil is multifilar.
- 3. (Original) The sheath in accordance with claim 1, wherein the second coil is multifilar.
- 4. (Original) The sheath in accordance with claim 1, wherein the first and second coils are multifilar.
- 5. (Original) The sheath in accordance with claim 1, wherein the first coil includes a wire having a circular cross section.

- 6. (Original) The sheath in accordance with claim 1, wherein the second coil includes a wire having a circular cross section.
- 7. (Original) The sheath in accordance with claim 1, wherein the first and second coils including wires having circular cross sections.
- 8. (Original) The sheath in accordance with claim 1, wherein the first coil includes a wire having a generally rectangular cross section.
- 9. (Original) The sheath in accordance with claim 1, wherein the second coil includes a wire having a generally rectangular cross section.
- 10. (Original) The sheath in accordance with claim 1, wherein the first and second coils include wires having generally rectangular cross sections.
- 11. (Original) The sheath in accordance with claim 1, wherein the coil assembly includes a proximal taper.
- 12. (Original) The sheath in accordance with claim 1, wherein the coil assembly is coated with a polymer.
- 13. (Original) The sheath in accordance with claim 1, wherein the coil assembly is heat bonded to the shaft.
- 14. (Original) The sheath in accordance with claim 1, wherein the first coil includes a polymer coated wire.
- 15. (Original) The sheath in accordance with claim 1, wherein the second coil includes a polymer coated wire.

16. (Currently Amended) An embolic protection sheath, comprising: an elongate shaft having a proximal end and a distal end, and a lumen extending therethrough;

a coil assembly including a first coil and a second coil, the first coil defining a lumen and being wound in a first direction, the second coil being wound in a second direction and disposed about an outer surface of the first coil, wherein the coil assembly has a diameter that is larger than the diameter of the shaft;

wherein the coil assembly is <u>attached to the outer surface disposed about</u> at least a portion of the distal end of the shaft, and the lumen of the shaft is <u>in</u> fluid communication with the lumen of the first coil; and

an embolic protection device including an elongate wire and a filter attached thereto, wherein the wire is disposed at least in part in the shaft lumen.

- 17. (Original) The sheath in accordance with claim 16, wherein the first coil is multifilar.
- 18. (Original) The sheath in accordance with claim 16, wherein the second coil is multifilar.
- 19. (Original) The sheath in accordance with claim 16, wherein the first and second coils are multifilar.
- 20. (Original) The sheath in accordance with claim 16, wherein the first coil includes a wire having a circular cross section.
- 21. (Original) The sheath in accordance with claim 16, wherein the second coil includes a wire having a circular cross section.
- 22. (Original) The sheath in accordance with claim 16, wherein the first and second coils including wires having circular cross sections.

- 23. (Original) The sheath in accordance with claim 16, wherein the first coil includes a wire having a generally rectangular cross section.
- 24. (Original) The sheath in accordance with claim 16, wherein the second coil includes a wire having a generally rectangular cross section.
- 25. (Original) The sheath in accordance with claim 16, wherein the first and second coils include wires having generally rectangular cross sections.
- 26. (Original) The sheath in accordance with claim 16, wherein the coil assembly includes a proximal taper.
- 27. (Original) The sheath in accordance with claim 16, wherein the coil assembly is coated with a polymer.
- 28. (Original) The sheath in accordance with claim 16, wherein the coil assembly is heat bonded to the shaft.
- 29. (Original) The sheath in accordance with claim 16, wherein the first coil includes a polymer coated wire.
- 30. (Original) The sheath in accordance with claim 16, wherein the second coil includes a polymer coated wire.
- 31. (Currently Amended) An embolic protection sheath, comprising: a coil assembly including a first coil and a second coil, the first coil defining a lumen and being wound in a first direction, the second coil being wound in a second direction and disposed about an outer surface of the first coil;

wherein the coil assembly is attached to the outer surface and disposed about at least a portion of the distal end of a shaft, and a lumen of the shaft is in fluid communication with the lumen of the first coil; and

wherein the coil assembly has a diameter that is larger than the diameter of the shaft; and

an embolic protection device including an elongate wire and a filter attached thereto, wherein the wire is disposed at least in part in the shaft lumen.

- 32. (Original) The sheath in accordance with claim 31, wherein the first coil is multifilar.
- 33. (Original) The sheath in accordance with claim 31, wherein the second coil is multifilar.
- 34. (Original) The sheath in accordance with claim 31, wherein the first and second coils are multifilar.
- 35. (Original) The sheath in accordance with claim 31, wherein the first coil includes a wire having a circular cross section.
- 36. (Original) The sheath in accordance with claim 31, wherein the second coil includes a wire having a circular cross section.
- 37. (Original) The sheath in accordance with claim 31, wherein the first and second coils including wires having circular cross sections.
- 38. (Original) The sheath in accordance with claim 31, wherein the first coil includes a wire having a generally rectangular cross section.
- 39. (Original) The sheath in accordance with claim 31, wherein the second coil includes a wire having a generally rectangular cross section.

- 40. (Original) The sheath in accordance with claim 31, wherein the first and second coils include wires having generally rectangular cross sections.
- 41. (Original) The assembly in accordance with claim 31, wherein the coil assembly includes a first diameter section and a second diameter section having a diameter greater than the first diameter section.
- 42. (Original) The sheath in accordance with claim 31, wherein the coil assembly is coated with a polymer.
- 43. (Original) The sheath in accordance with claim 31, wherein the first coil includes a polymer coated wire.
- 44. (Original) The sheath in accordance with claim 31, wherein the second coil includes a polymer coated wire.
